## **Realize Inc. Expands its Prototyping Business by Offering Custom Art Projects**

NOBLESVILLE, IND. – While most of the work at Realize Inc. involves precision reproduction of engineered 3D models, the rapid prototyping company has expanded its services to include custom artistic projects where aesthetics are paramount.

“We’re always excited when someone approaches us with a more free-form idea,” said Todd Reese, President of Realize Inc. “It’s a break from the norm, and it gives us a chance to cut loose and let the imagination run.”

Based near Indianapolis, Ind., Realize Inc. creates custom rapid prototypes of products for clients in numerous industries, including aerospace, biomedical and electronics. However, clients sometimes request a project that involves more of a creative flair. Reese says that demand for artistic projects at Realize is increasing and that they are now well positioned to take on more of this type of work.

Adam Poots, a creative director, designer and web developer who is creating a role-playing game/board game system, recently selected Realize to fabricate two ornately inscribed miniature books stacked on top of each other.

"It takes a very special combination of love and mastery in order to achieve what Realize Inc. has," Poots said. "The company is a powerhouse of titan class individuals who know how to push their technology to the very edge of its capability."

Realize Finishing Technician Charlie Guernsey has vast experience with artistic oriented projects. “Ever since I was old enough to hold a paint brush, I have been drawn to all things creative. Having the opportunity to help Realize expand into this arena will be very rewarding. I can’t wait to showcase my abilities to complement our other services.” says Guernsey.

Founded in 1999, Realize has grown into one of the largest rapid prototyping companies in the Midwest. Customers use Realize to test product designs before undergoing the cost of full production. Services include Stereolithography, RTV molding and Cast Urethane Models, Industrial Design, Computer Aided Design and Custom Finishing and Painting.
